

How To Apply Concealer

APPLICATION TIPS

Concealer can be applied either over or under your foundation.

- Place a small amount of powder on your fingertip and dot the product on (dry),
- or use a concealer brush. Be sure to blend, blend, blend!
- Try a makeup sponge - blend in a gentle back and forth "dotting" motion.
- Be careful not to pull or rub the skin.

For Dark Circles:

If your circles are blue, use Natural, or if your circles are purple, use Golden Sand. Using your fingertip or concealer brush, move from the outside corner of the eye inward and then back out again.

You should also apply a bit slightly below your dark circles to avoid the raccoon look. Once application is complete, look in the mirror and smile to see if the application is even, and the product hasn't crept into the little lines around your eye (can be removed with a tissue).
